INTRODUCTION

The "Eco Robot Cable" is specially designed for robot mowers for small to medium-sized installations in unrestricted gardens. This cable can be buried or laid directly on the ground (the black colour is perfect for discreet installation). It is extremely flexible, red copper of 1 mm² with excellent conductivity (up to 800 m / installation), **without any toxic material and animal fat.**

Made in EUROPE.

Non-toxic, without animal fat

ACCESSOIRES OSVAN

Easy, safe and **professional** installation thanks to OSVAN accessories

INSTALLATION

The installation of "Eco Robot Cable" is similar as the installation of standards cables. It can be used by most of cable-layers on the market. The connections are made in an identical way or by welding or by using tight IP67 Osvan or 3M connectors. The installation stays very easy with a higher quality cable.

OSVAN proposes connectors, adapters for cable-layers, accessories and robot mower houses.
